Introducción

Teniendo en cuenta que en la publicación de los científicos chinos de la revista Lancet del 22 de febrero 2020 ellos mismos reconocen que crearon un genoma por consenso de forma artificial utilizando al menos 3 softwares y sacando datos del Genbank de internet.

Que luego de esa publicación ningún país o institución del mundo ha podido aislar, ni secuenciar de forma real, ni cultivar el supuesto Sars-Cov 2. Que por lo tanto el virus no existe en la naturaleza ni circula entre los seres humanos.

Que la OMS prohibió hacer autopsias a todos los países.

Martín

Que el médico italiano Pasquale Bacco realizó 400 autopsias en junio julio agosto de 2020 en pacientes diagnosticados covid, pero no encontró en pulmón daños compatibles con neumonía viral, sino que encontró microcoágulos diseminados en pulmón.

Que en los pacientes que sufren tromboembolismo pulmonar masivo esta contraindicada la intubación.

Que el señor Bill Gates estableció un nivel de censura total en las redes para que no se escuchara a médicos y científicos disidentes.

Que en una residencia murieron 86 abuelos en 6 horas en España.

En Washington murieron 80 abuelos en una residencia en 4 horas.

Que los abuelos habían sido vacunados previamente con la vacuna antigripal 2019-2020.

Que el informe Barbastro demostró que habían fallecido los abuelos que estaban vacunados.

Que la vacuna antigripal llevaba grafeno, análisis de Ricardo Delgado.

Que una vez comenzado el año 2021 y la Campaña de Vacunación, se empezaron a elevar las estadísticas de muertes en los países que informan.

Que empezamos a ver serios daños por la vacuna, neurodegeneración, convulsiones, Alzheimer, trombosis, arritmias, muertes súbitas, parálisis ceguera, mielitis encefalitis, hemorragias, las pérdidas de los embarazos se multiplicaron por 6800. Que simultáneamente empezamos a observar el fenómeno del magnetismo en los vacunados.

Que observamos además que los vacunados emiten un código bluetooth.

Que enseguida forzaron a la población a una segunda dosis, luego a una tercera, luego a una cuarta...

Que el señor Bill Gates y el señor Klaus Schwab tienen una obsesión por reducir la población mundial. Que en junio de 2021 el Profesor Pablo Campra constató la presencia de grafeno en un vial de Pfizer, lo cual fue ratificado en noviembre 2021 con viales de Astrazeneca, Moderna, Jansenn y Pfizer.

Que los investigadores chilenos constataron la presencia grafeno en los viales de Sinovac, Astrazeneca y Pfizer.

Que así mismo en Estados Unidos la Dra Carrie Madej, la Dra Jane Ruby, el científico Robert Young constataron la presencia de grafeno en los viales.

Que también en Estados Unidos la Dra Zandre Botta constató la presencia de microburbujas de garfeno en la sangre de los vacunados, al igual que los científicos franceses que encontraron grafeno en las muestras de sangre.

Que los científicos alemanes encontraron grafeno al analizar viales y en sangre de los vacunados.

Que Japón retiró 2.600.000 viales de moderna por contener partículas metálicas magnéticas.

Que los Ministros de Salud de Argentina no han contestado nuestras preguntas en referencia al contenido de los viales.

El Congreso de la Nación sancionó una ley otorgando confidencialidad sobre el contenido e impunidad a los laboratorios por cualquier daño que pudieran causar las vacunas.

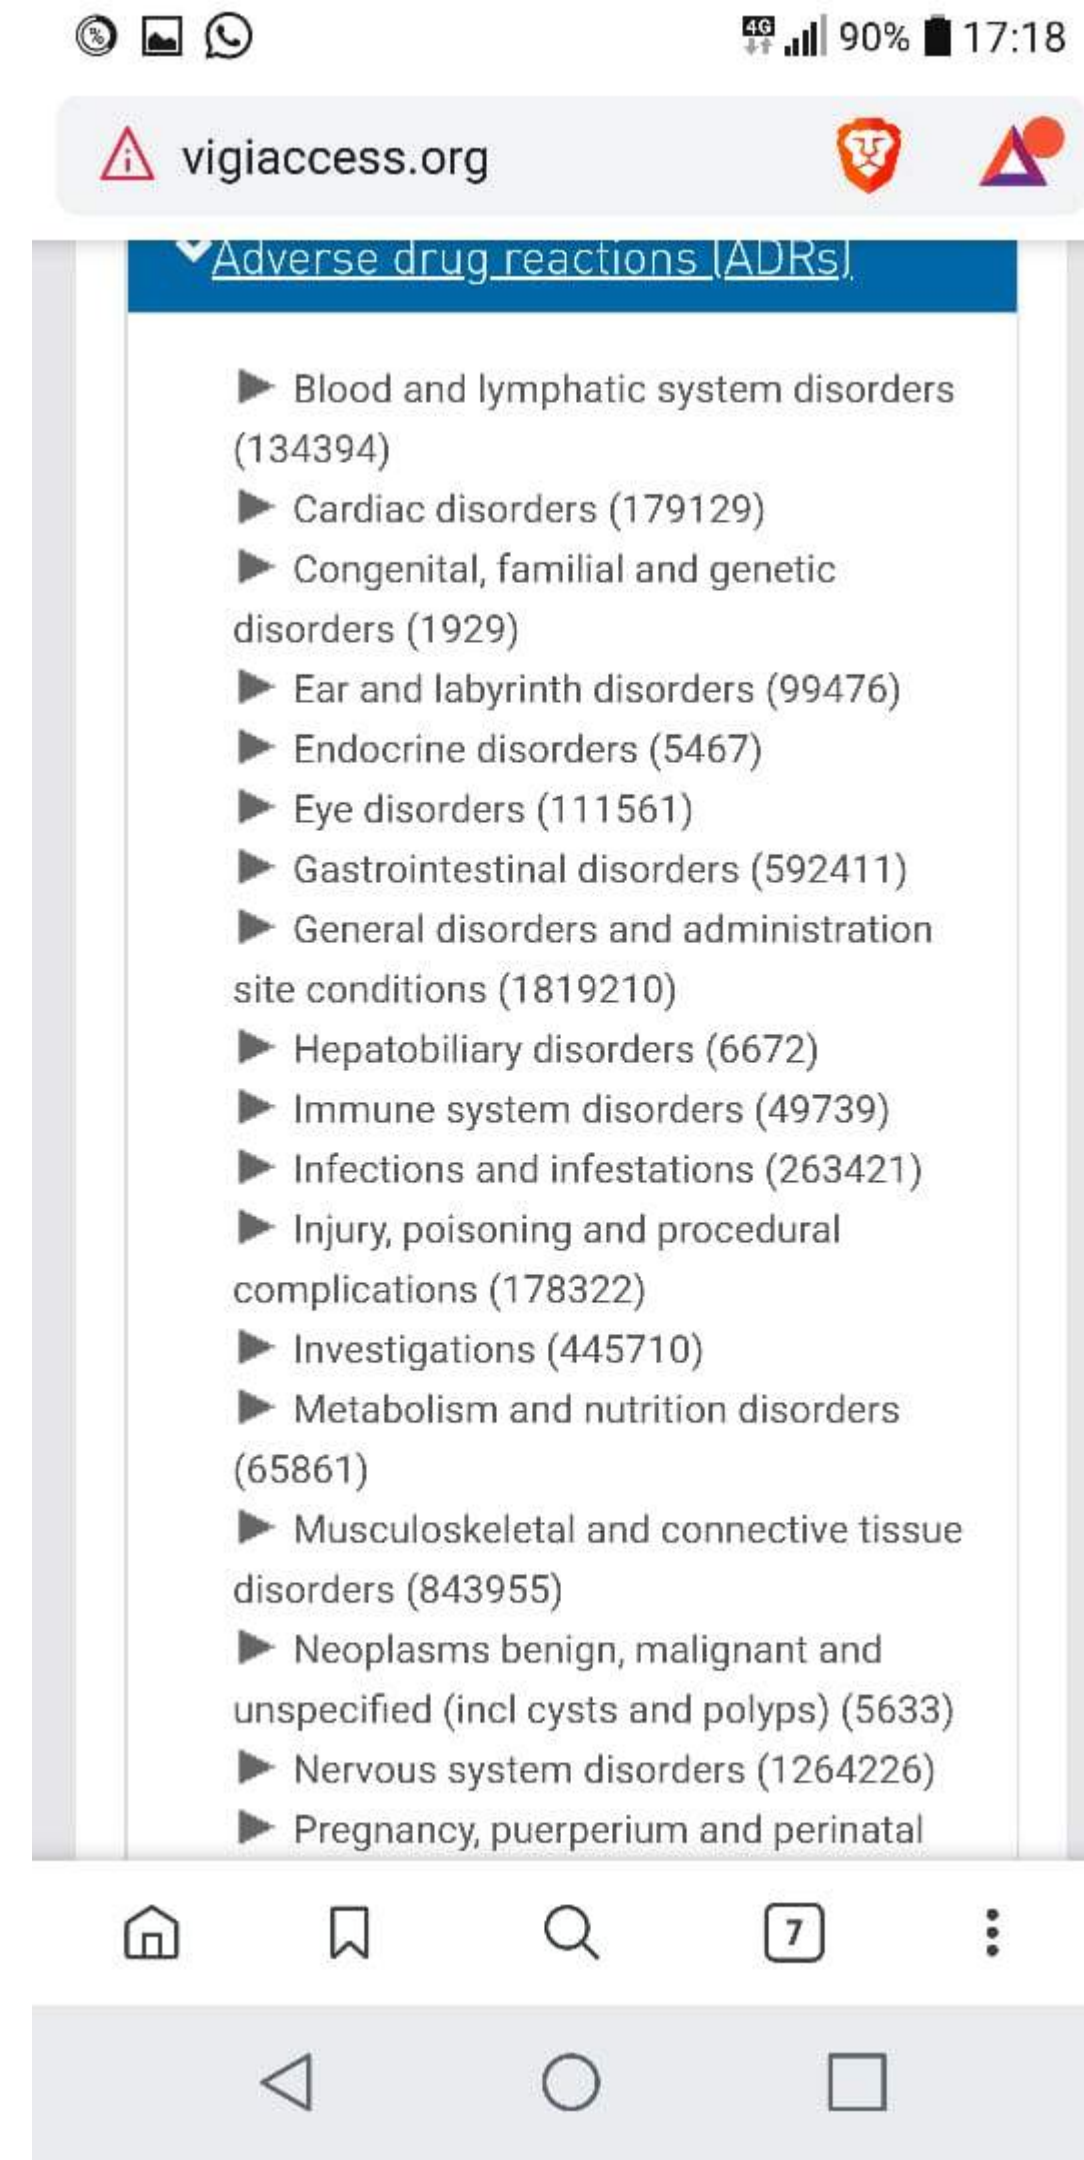

Nuestro Presidente de la Nación declaró que Argentina era uno de los 10 países elegidos para experimentar con la población.

Que la ANMAT no analizó un solo vial.

Que en argentina han muerto mas de 30 niños un día después de la vacuna.

En todo el mundo se evidencia a diario como deportistas profesionales se desploman o se descompensan en plena actividad deportiva.

Que los gobiernos y los medios están tapando todo. Por todo ello hemos decidido hacer nuestra propia investigación sobre el contenido de viales de Pfizer, Astrazéneca, Sputnik, Sinopharm y Cansino.

Método de Análisis

01

Microscopio

Se trabajo con microscopio marca NIKON,
modelo ECLIPSE 50i.

Los aumentos utilizados para la observación
fueron de 100x 200x y 400x,1000x

02

Observaciones

Hemos observado muestras de gota fresca
en directo , utilizando cubre objeto en
algunas ocasiones.

ENERO 2022

CANSINO

1 Vial analizado

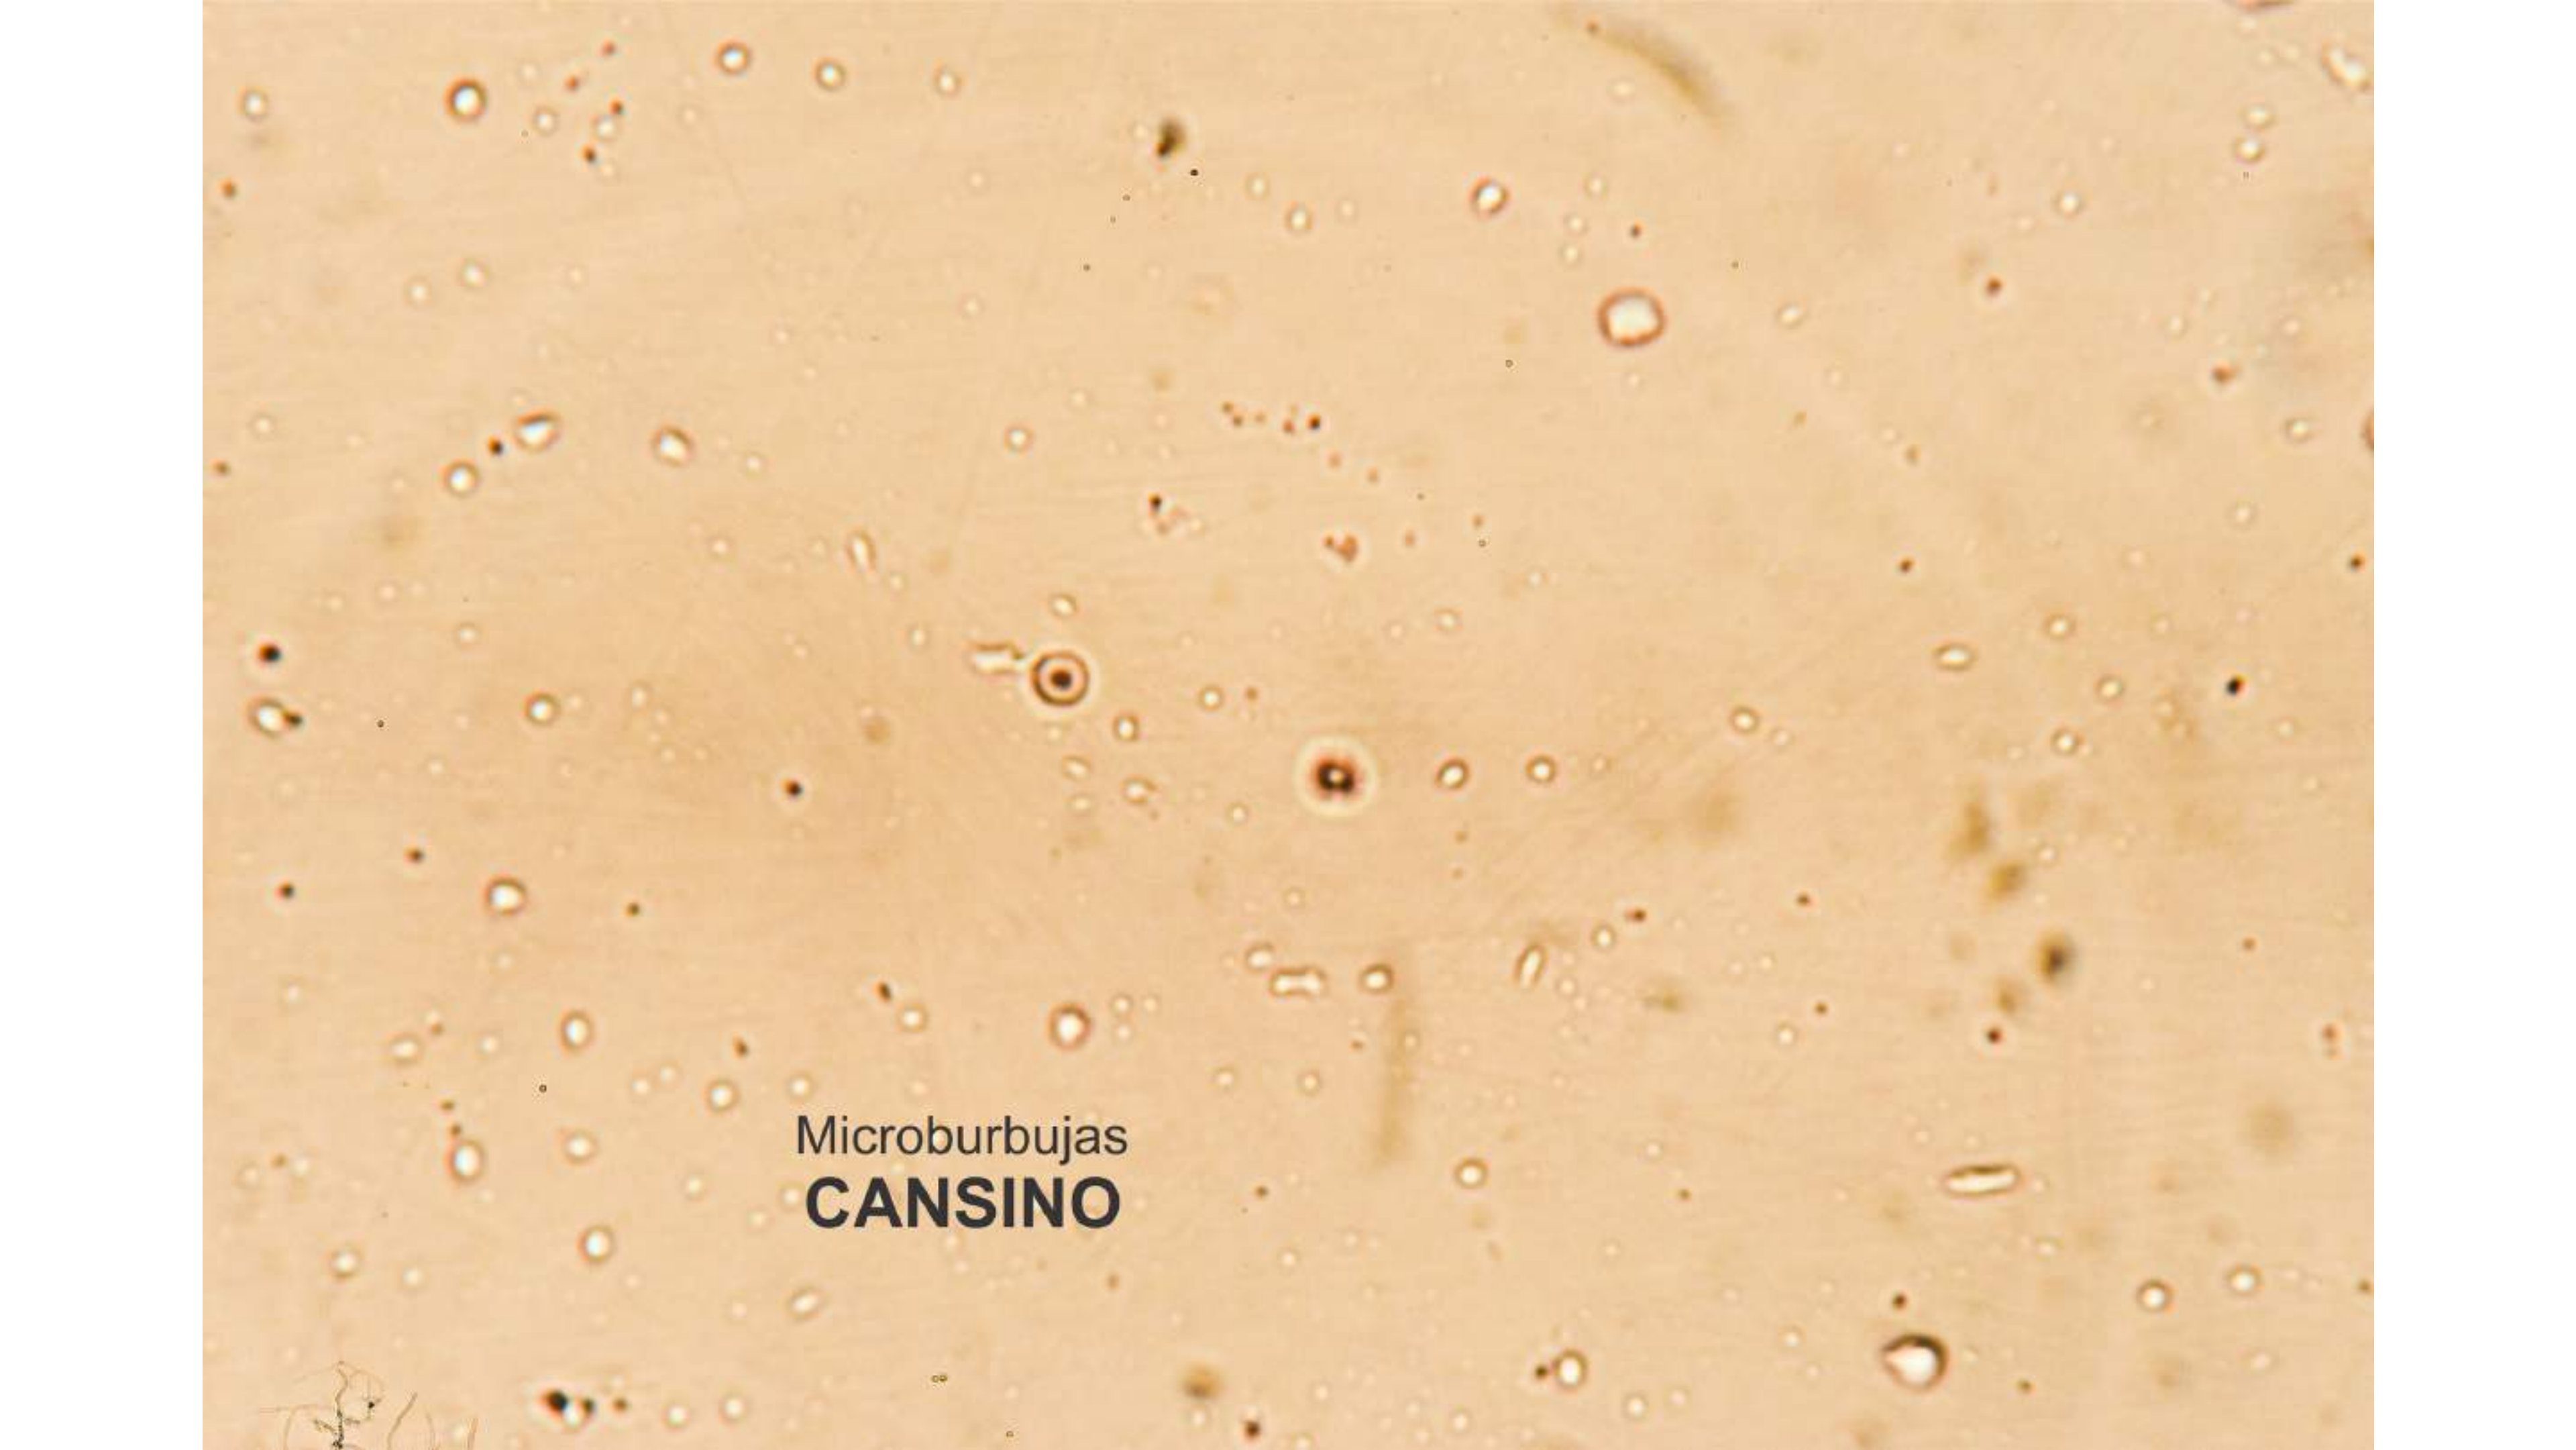

A microscopic image showing the tip of a graphite pencil lead. The lead is dark and has a rough, layered texture. The background is a light, yellowish-brown color with some small dark spots. The text 'Grafeno CANSINO' is overlaid on the right side of the image.

Grafeno
CANSINO

A microscopic image showing numerous small, spherical microbubbles of varying sizes scattered across a light brown, slightly textured liquid background. Some bubbles are larger and more prominent, while others are tiny specks. A few bubbles have a darker center, possibly indicating a core or a different internal structure. The overall appearance is that of a colloidal suspension of gas in a liquid.

PFIZER

1 Vial analizado

Microcircuito
PFIZER

A circular microscopic view showing a thin, translucent, yellowish membrane stretched across a liquid surface. Two dark, spherical microbubbles are visible on the membrane, one slightly larger than the other. The background is a uniform light yellow color.

PFIZER

Microcircuito
PFIZER

Grafeno
PFIZER

A microscopic image showing a central, elongated, rectangular component with a complex internal structure, possibly a microcircuit or a biological cell. The component is surrounded by a dense field of small, spherical particles on a light brown, textured background. The component itself has a pinkish outer layer and a greenish-yellow internal structure with some darker spots.

Microcircuito
PFIZER

Grafeno
PFIZER

Microburbujas y Grafeno

PFIZER

A microscopic image of a cell, likely a fibroblast, showing a nucleus and cytoplasm. The cell is stained, with the nucleus appearing dark and the cytoplasm showing some internal structures. The background is a light, textured surface. The text 'Grafeno PFIZER' is overlaid on the right side of the image.

Grafeno
PFIZER

Grafeno
PFIZER

A grayscale microscopic image of a tissue section, likely showing cellular structures and possibly a blood vessel. The image is overlaid with a semi-transparent Pfizer logo. The logo consists of the word "Grafeno" in a smaller font above the word "PFIZER" in a larger, bold, sans-serif font. The background shows a dense network of cells and fibers, with some larger, more complex structures that could be glandular or vascular in nature.

Grafeno
PFIZER

A scanning electron micrograph (SEM) showing a dense array of circular microbubbles on a flat surface. The bubbles vary in size and are distributed across the field of view. Some bubbles exhibit a distinct purple or blue hue, likely due to the presence of a specific material or coating. The background surface appears textured and slightly irregular.

ASTRAZÉNECA

1 Vial analizado

Grafeno
AZTRAZENECA

A circular microscopic field of view showing a dense population of small, dark, rod-shaped organisms. Two larger, more complex structures are highlighted with a blue and yellow border. The background is a light gray, granular texture.

Grafeno
ASTRAZÉNECA

Grafeno
ASTRAZÉNECA

Cinta de Grafeno
ASTRAZÉNECA

A microscopic image showing a copper foil substrate with a thin layer of graphene. The graphene is highlighted in yellow and blue, forming a long, narrow strip and a small, irregularly shaped flake. The background is a textured, greyish surface with many small, circular features.

Grafeno
ASTRAZÉNECA

Cinta de Grafeno
ASTRAZÉNECA

Microburbujas
ASTRAZÉNECA

A microscopic image showing several long, thin, yellowish-brown ribbons of graphene. The ribbons are oriented diagonally across the frame, from the bottom left towards the top right. They have a textured, fibrous appearance with some internal structure visible. The background is a light gray, slightly mottled surface with some small, dark, irregular spots and faint, elongated shapes, possibly other particles or debris. The ribbons appear to be made of multiple layers or are very thin, showing some flexibility and slight curvature.

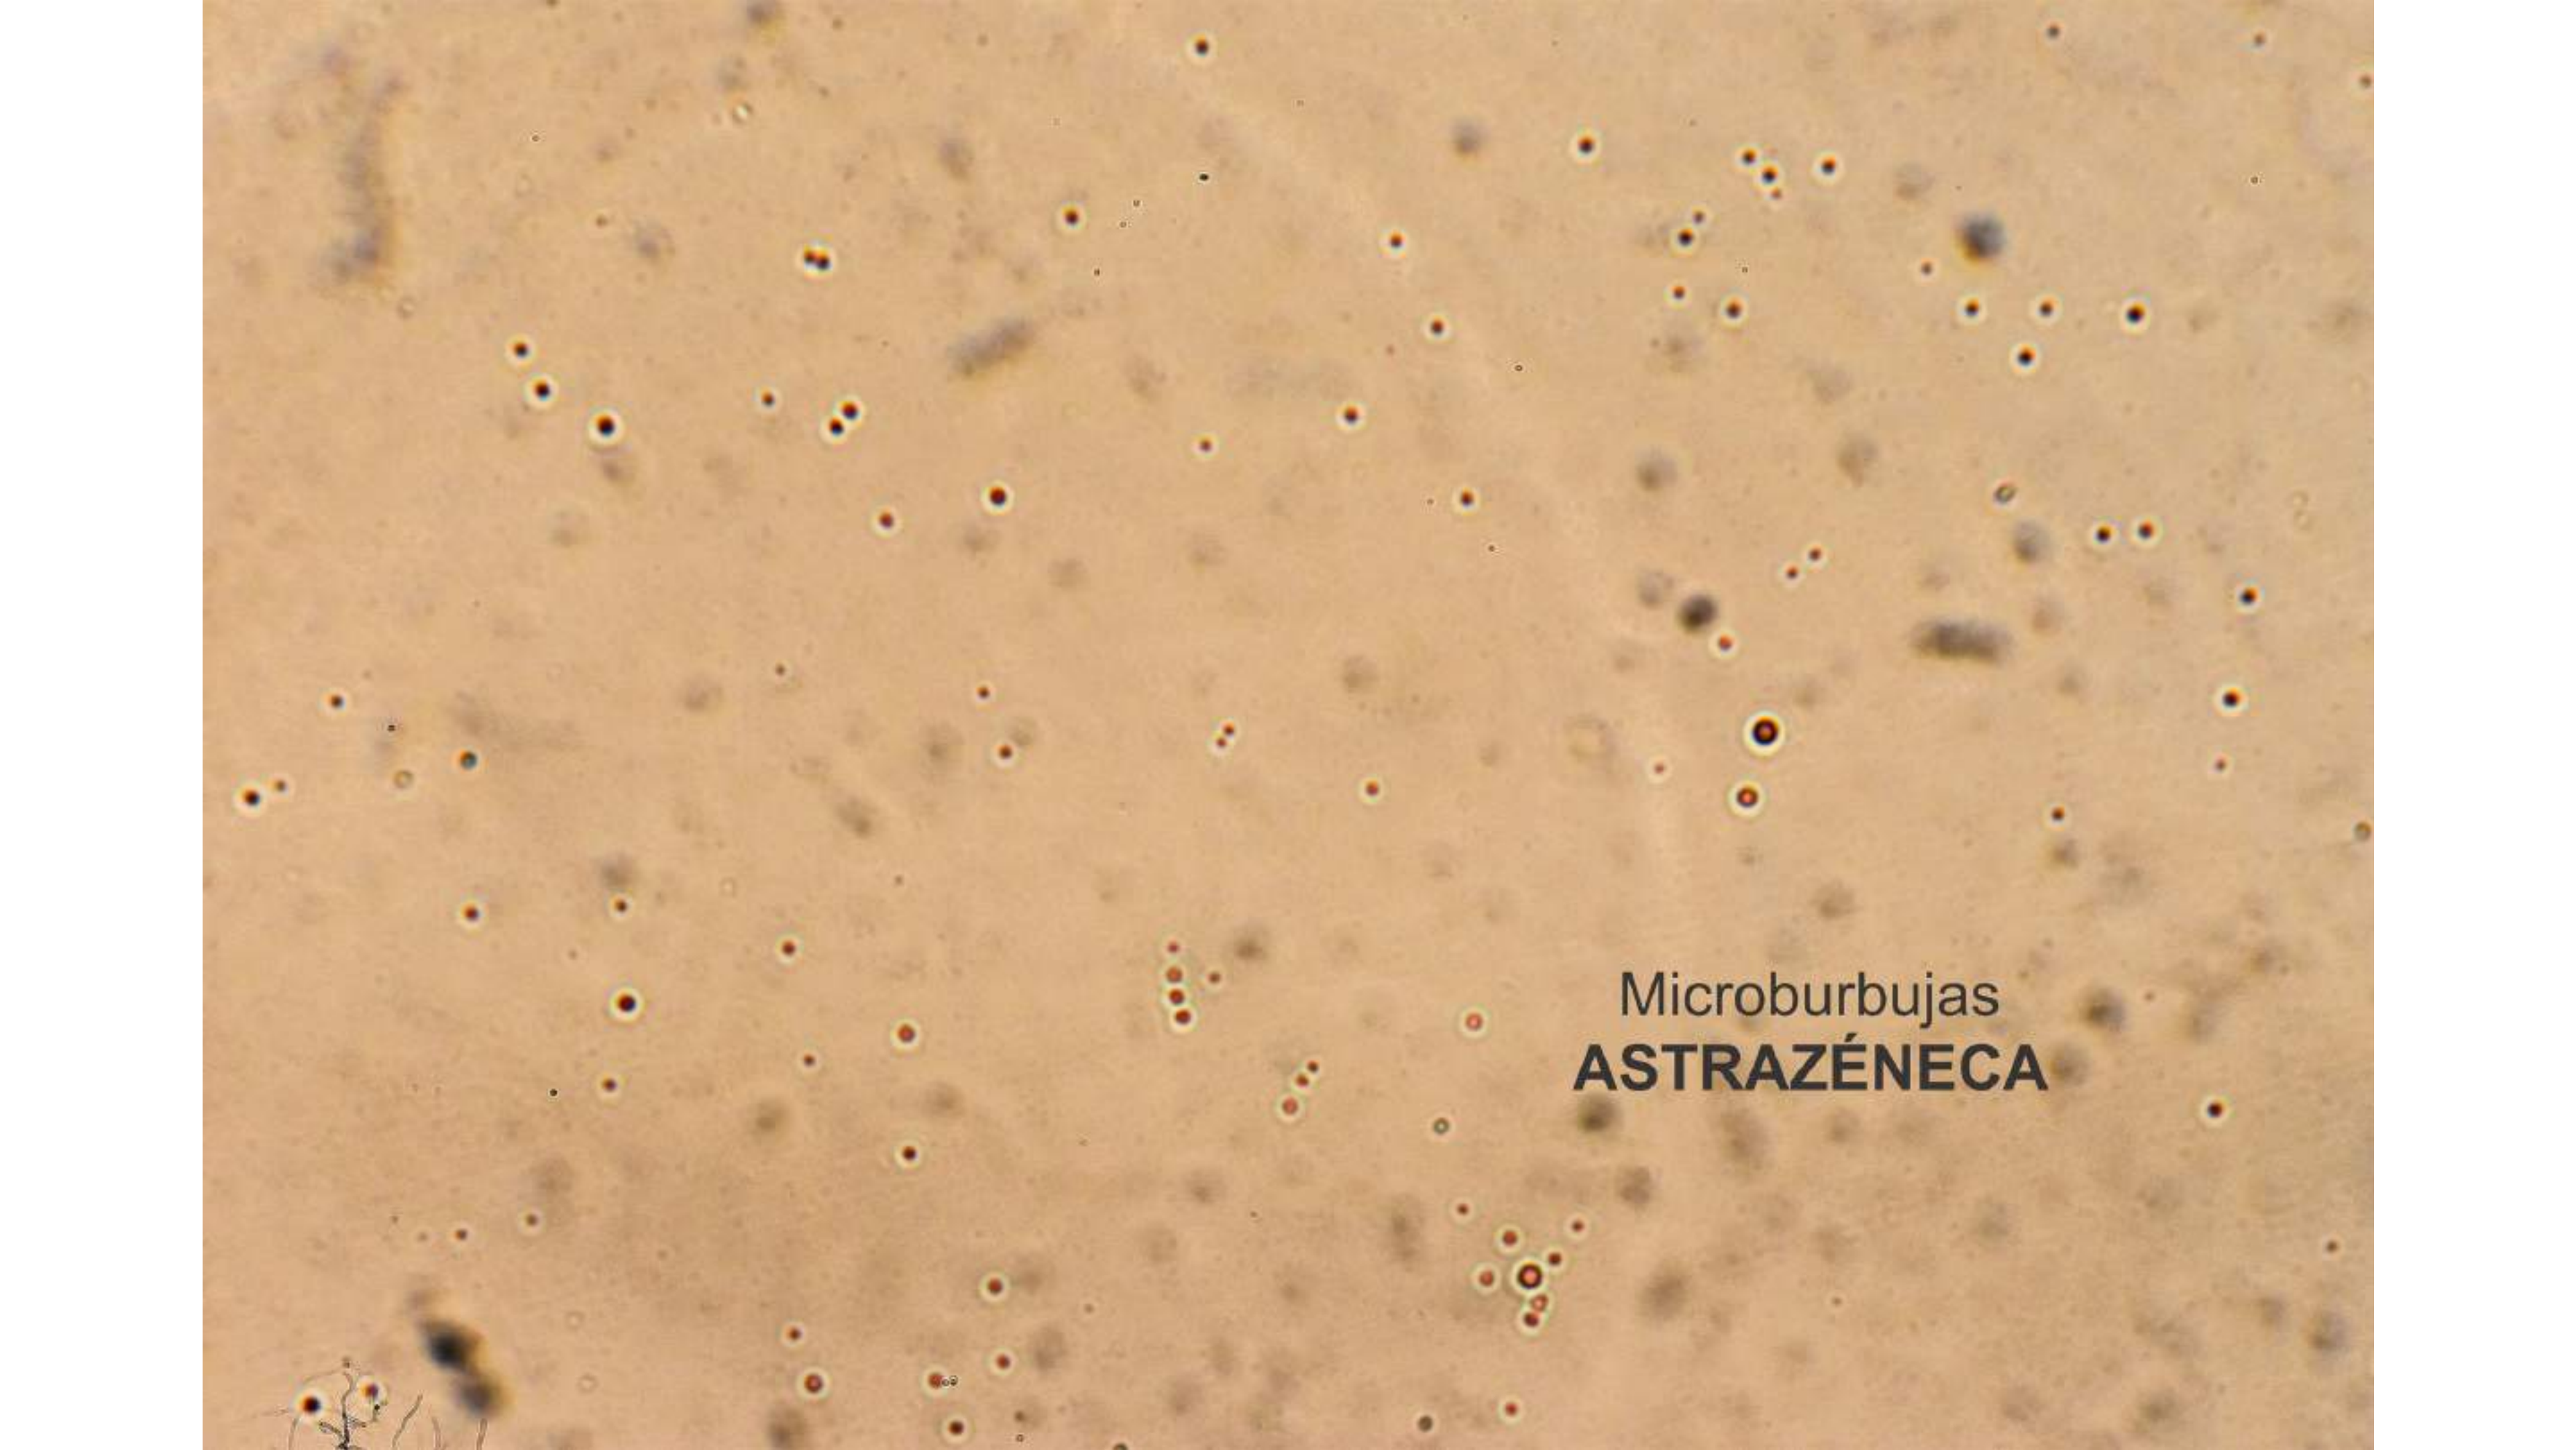

Cinta de Grafeno
ASTRAZÉNECA

Cinta de Grafeno
ASTRAZÉNECA

Grafeno y Microcircuito
ASTRAZÉNECA

Microburbujas
ASTRAZÉNECA

A grayscale micrograph showing a central vertical strip of a microcircuit. The strip is densely packed with small, bright, irregularly shaped structures, likely microbubbles or microfluidic components. The surrounding area is a uniform gray with scattered small, dark, circular spots, possibly representing individual microbubbles or debris. The overall texture is grainy, typical of a micrograph.

Microburbujas y Microcircuito
ASTRAZÉNECA

ASTRAZÉNECA

A scanning electron microscope (SEM) image of a graphene sheet. The sheet exhibits a characteristic rainbow-like interference pattern, with colors ranging from purple to yellow. A central region shows a complex, interconnected network of lines, likely representing a defect or a specific crystal structure. The background is a light gray, textured surface.

Grafeno
ASTRAZÉNECA

A microscopic image showing a single, long, thin, and slightly curved graphene ribbon. The ribbon is highlighted with a blue and yellow border, making it stand out against the grey background. The background contains numerous small, dark, irregular shapes, likely other particles or debris. The overall image has a grainy, high-magnification appearance.

Cinta de Grafeno
ASTRAZÉNECA

A scanning electron microscope (SEM) image showing a graphene butterfly structure on a substrate. The structure is composed of several interconnected, curved, and overlapping layers of graphene, forming a complex, butterfly-like shape. The layers are thin and translucent, with some areas appearing darker due to the overlapping. The substrate is a light gray, textured surface with various small, dark, irregular spots and features. The overall appearance is that of a delicate, multi-layered structure.

Mariposa de Grafeno
ASTRAZÉNECA

A microscopic view of a microcircuit component, likely a microchip, showing various structures and components. The image displays a complex network of fine lines and patterns, characteristic of a microcircuit. A prominent feature is a central, elongated, rectangular structure with a distinct, slightly irregular shape, possibly a microchip or a specific component. The surrounding area is filled with smaller, circular and elongated structures, some of which appear to be interconnected by thin lines. The overall appearance is that of a highly detailed and intricate microcircuit.

Microcircuito
ASTRAZÉNECA

A microscopic view of a microcircuit component, likely a microchip, showing various structures and components. The image is a grayscale micrograph with a light gray background. In the center, there is a prominent, elongated, rectangular structure with a distinct, slightly irregular border, possibly a microchip or a specific component. Surrounding this central structure are numerous smaller, circular and elongated features, some of which appear to be microstructures or components of the circuit. The overall appearance is that of a complex, multi-layered microcircuit.

Microcircuito
ASTRAZÉNECA

Grafeno
ASTRAZÉNECA

Mariposa de Grafeno
ASTRAZÉNECA

Cinta de Grafeno
ASTRAZÉNECA

A microscopic image showing a long, thin, and slightly curved graphene ribbon. The ribbon is primarily yellow, with a distinct blue line running along its length, likely representing a defect or a specific edge. The background is a light gray, textured surface with various small, dark spots and circular features, possibly representing other materials or contaminants on the substrate.

Cinta de Grafeno
ASTRAZÉNECA

AZTRAZÉNECA

This image shows a single nematode under brightfield illumination. The nematode is oriented horizontally and has a distinct, rounded head region on the left side. The body is composed of several overlapping, translucent layers, giving it a textured appearance. The background is a uniform, light yellow color.

AZTRAZÉNECA

This image shows the same nematode under fluorescence illumination. The nematode appears as a bright blue, elongated shape against a dark blue background. The head region is more intensely blue and rounded. There are a few smaller, faint blue spots scattered around the main body of the nematode.

AZTRAZÉNECA

ENERO 2022

SINOPHARM

2 viales analizados

Grafeno y Microburbujas
SINOPHARM

A microscopic image showing a long, thin, segmented biological specimen, likely a nematode, positioned vertically in the center. The specimen has a distinct head region at the top and a tapered tail at the bottom. The background is a light brown, textured surface with numerous small, dark, circular spots and some faint, branching structures. The text 'Grafeno SINOPHARM' is overlaid on the right side of the image.

Grafeno
SINOPHARM

Grafeno
SINOPHARM

Microcircuito
SINOPHARM

Grafeno
SINOPHARM

A microscopic image showing a microcircuit with a graphene layer. The background is a light brown, textured surface. A large, dark, irregularly shaped object is visible in the lower center, likely representing the graphene layer. Several small, circular features are scattered across the surface, possibly representing microcircuit components or defects. The text "Microcircuito y Grafeno" is overlaid in the upper right, and "SINOPHARM" is overlaid in the center in a larger, bold font.

Microcircuito y Grafeno
SINOPHARM

A microscopic image showing a microcircuit with a graphene layer. The background is a light brown, textured surface. A prominent feature is a dark, irregularly shaped, multi-layered structure in the lower center, which is the graphene layer. To its left is a rectangular, light-colored structure. The overall appearance is that of a microscopic view of a microcircuit with a graphene layer.

Microcircuito y Grafeno
SINOPHARM

A photograph of a microcircuit board with a yellowish-tan background. A thick black line traces a path across the board. A small, rectangular component is highlighted with a purple box. The text "Microcircuito SINOPHARM" is printed in the lower right area of the board.

Microcircuito
SINOPHARM

A microscopic view of a microcircuit component on a substrate. The component is a small, rectangular, multi-layered structure with a central opening, mounted on a dark, curved substrate. The background is a light brown, textured surface with numerous small, yellowish, circular particles scattered across it. The component is highlighted by a purple rectangular outline.

A microscopic image showing a single, dark, irregularly shaped graphene flake resting on a copper foil substrate. The copper foil has a characteristic orange-gold color and a fine, granular texture. The graphene flake is dark brown to black, with a slightly irregular, jagged edge. The background is a uniform, light orange-gold color with a fine, granular texture.

Grafeno
SPUTNIK

Cintas de Grafeno
SPUTNIK

A microscopic image showing a single, long, thin, and slightly curved graphene ribbon. The ribbon is dark brown or black, with a visible longitudinal texture. It is set against a light, yellowish background with a fine, granular texture. The entire scene is framed by a circular blue border, characteristic of a microscope's field of view.

SPUTNIK

A microscopic image of a graphene membrane, which is a single layer of carbon atoms arranged in a hexagonal lattice. The membrane is shown as a light brown, textured surface. A prominent feature is a large, irregularly shaped hole in the center, which is surrounded by a darker, more defined border. Scattered across the surface are numerous smaller, dark spots and clusters, representing various types of defects or impurities in the graphene lattice. The overall appearance is that of a thin, porous material with a complex, non-uniform structure.

Análisis de los resultados

Hemos confirmado la presencia de Láminas de Grafeno, Cintas de Grafeno, Microburbujas de Grafeno, aglutinados de grafeno y/o derivados de grafeno en todas las muestras.

Hemos constatado también la presencia de estructuras rectangulares y cuadradas artificiales compatibles con microcircuitos en todos los viales.

Se anexan fotografías
